

**Victorian Tiles** are fully vitrified, frost resistant and suitable for interior and exterior use. Create your own colourful designs or use traditional patterns. Pieces are supplied individually

**Installation :**

We recommended to use a professional tile fitter to lay Victorian floor tiles. Exterior Tiles should be laid on a perfectly flat sub-base with a slight fall to avoid rain water pooling. Use a cementitious tile adhesive and a fine, cement based, grout.

**Sealing:**

We recommend sealing the (Dry) interior tiles using Lithofin KF StainStop, and an interior sheen can be achieved using Lithofin KF Tile Polish from:- [www.extensive.co.uk](http://www.extensive.co.uk) Do Not Seal Exterior Tiles

**Dimensions & Colour**

There may be small variations in both size and shading due to different firings. Adjust grout lines to allow for dimensional differences. It is advisable to mix tiles of the same colour from different boxes to ensure that any colour variations are evenly distributed.

All triangles, and squares 70mm and below, have completely square edges. Squares and octagons of 100mm and 150mm, and hexagons, have a small bevelled edge, which gives a flush finish once grouted.

**Approx tiles per m<sup>2</sup>**

Dimension	No of Tiles
150mm	45 tiles
100mm	100 tiles
75mm	204 tiles
50mm	400 tiles
35mm	810 tiles
